Profile

I am a solution-focused backend developer specializing in building high-performance, scalable, and secure backend systems using **Java and Python**. I excel in designing and developing RESTful APIs, microservices, and distributed applications. Proficient in working with databases such as MySQL and PostgreSQL, messaging systems like Kafka and RabbitMQ, and integrating payment gateways such as Paystack. I thrive in agile environments, leveraging Git, Docker, and CI/CD workflows, and I am passionate about delivering solutions that bridge backend systems with modern frontend technologies like React and Next.js. My goal is to build reliable, production-ready systems that solve real-world business problems. Additionally, I enjoy using AI tools such as Cursor, Claude, ChatGPT for effective workflows.

Skills

Technical Skill — Java · Spring Boot · Spring Security · JWT Authentication · OAuth2 · REST APIs · Microservices · Python · Django · PostgreSQL · MySQL · Redis · Kafka · RabbitMQ · Celery · Docker · CI/CD · OOP · Web Scraping (Selenium, BeautifulSoup) · AI/ML Integration · Unit & Integration Testing · Git/GitHub · Payment Gateway Integration (Paystack) · Swagger/OpenAPI · Cloud Deployment · Agile/Scrum · Linux Development

Professional Experience

- Backend Lead**
Skynet Inc

2026
Lagos, Nigeria

 - I led the development team to deliver a production-ready e-commerce backend system, coordinating tasks, reviewing code, and ensuring adherence to best practices.
 - Architected RESTful APIs using Spring Boot, handling authentication, role-based access control, and secure transaction workflows.
 - Integrated Paystack payment gateway for seamless and secure online payments, handling verification, refunds, and notifications.
 - Designed and implemented asynchronous messaging workflows with RabbitMQ to manage order processing, inventory updates, and real-time notifications efficiently.
 - Coordinated cross-functional integration with frontend developers using React, ensuring smooth data flow between APIs and user interfaces.
 - Implemented CI/CD pipelines, Docker containerization, and automated testing strategies to ensure deployment stability and scalability.
- Backend Developer**
KhaneWorld Ltd.

2024
Remote

 - Collaborated with professionals on Jobboard, a full-stack AI-powered job board platform.

- Developed backend APIs with Django REST Framework, implementing user authentication via email/phone with OTP verification and JWT token-based authentication.
- Built CRUD operations for job listings, employer profile management, resume uploads, and job applications tracking.
- Integrated web scraping functionality using Selenium and BeautifulSoup4 for aggregating job listings from external sources.
- Implemented background task processing with Celery and Redis for asynchronous notifications and periodic scraping.
- Developed email notifications and administrative dashboards using Django admin for system management.
- Collaborated on frontend development with React, ensuring smooth API integration and responsive UI/UX.
- Ensured production readiness with Docker, PostgreSQL, Redis, and comprehensive documentation for deployment.

Projects

Farmatta

Digital Agricultural Platform designed to help farmers efficiently manage resources, track crops, and connect with markets, solving problems like fragmented farm data and inefficient marketplace access.

- **Backend Solution:** Built with **Java, Spring Boot, Spring MVC, Hibernate, and PostgreSQL/MySQL**, the backend provides secure RESTful APIs for user authentication, farm and crop tracking, order management, and real-time notifications. JWT is used for secure token-based authentication. RabbitMQ handles messaging for events like order updates and notifications and **Cloudinary** for media handling
- **Frontend:** React is used for user interfaces and API consumption.
- **Deployment & Tools:** Docker containerization, Swagger/OpenAPI for API documentation, CI/CD pipelines for production-ready delivery.
- **Stack:** Java, Spring Boot, Spring MVC, Hibernate, Spring Security, JWT, PostgreSQL/MySQL, RabbitMQ, Docker, Swagger/OpenAPI, CI/CD, React.

Jobboard

An AI full-stack recruitment platform designed to solve the problem of inefficient candidate-job matching, awkward job listings, and slow application tracking.

- **Backend Solution:** Developed using **Python, Django, Django REST Framework, PostgreSQL, and Redis**, the backend handles authentication (email/phone + OTP), JWT-based secure sessions, CRUD operations for jobs and employer profiles, resume uploads, and job application tracking. Celery with Redis manages background tasks, including notifications and scheduled scraping. Web scraping with Selenium and BeautifulSoup aggregates job listings from external sources.
- **AI Features:** Backend integration of AI-powered candidate-job matching for predictive hiring.
- **Frontend:** React + Next.js + TypeScript consumes backend APIs for interactive dashboards.
- **Deployment & Tools:** Docker containerization, CI/CD pipelines, logging and monitoring for production stability.
- **Stack:** Python, Django, Django REST Framework, PostgreSQL, Redis, Celery, JWT, Selenium, BeautifulSoup, Docker, CI/CD, React, Next.js, TypeScript.

Education

B.Sc. Chemistry

Federal University of Agriculture

2016

Makurdi, Benue
