PROFILE

I am a solution-focused backend developer specializing in building high-performance, scalable, and secure backend systems using Java. I excel in designing and developing RESTful APIs, microservices, and distributed applications. Proficient in working with databases such as MySQL and PostgreSQL, messaging systems like Kafka, and integrating payment gateways such as Paystack.

I thrive in agile environments, leveraging Git, Docker, and CI/CD workflows, and I am passionate about delivering solutions that bridge backend systems with modern frontend technologies like React and Next.js.

My goal is to build reliable, production-ready systems that solve real-world business problems. Additionally, I enjoy using AI tools such as Cursor, Claude, ChatGPT for effective workflows.

SKILLS

Technical Skill — Java, Spring Boot, Spring Security, JWT Authentication, OAuth2, Maven, REST APIs, Microservices, Django, PostgreSQL, MySQL, Redis, Kafka, Docker, Jenkins, Git Actions, OOP, Unit & Integration Testing, Postman, IntelliJ, VS Code, GitHub, Payment Gateway Integration, Heroku, Render, AWS, Linux Development

Soft Skills — Problem-Solving, Team Work, Time management, Integrity, Agile/Scrum,

PROFESSIONAL EXPERIENCE

Backend Developer, Skytouch Vision Company Ltd

2026 | VGC, Lagos

- Designed and developed the backend architecture of a full-stack job marketplace using **Java, Spring Boot, Spring Security, Hibernate, and PostgreSQL**, delivering **30+ RESTful API endpoints** supporting authentication, job management, applications, user profiles, subscriptions, Google-base locations, and administrative operations.
- Implemented secure authentication and authorization with **JWT, role-based access control (RBAC), email verification, and password recovery**, enabling separate workflows for **Job Seekers, Employers, and Administrators** while enforcing secure access to protected resources.
- Engineered a robust persistence layer using **Spring Data JPA, Flyway**, and PostgreSQL, designing and maintaining **20+ relational database tables** with version-controlled migrations to ensure data integrity and seamless schema evolution across development environments.
- Automated development and deployment workflows by containerizing the application with **Docker** and building a **Jenkins CI/CD pipeline** that executes automated builds, tests, and deployments, reducing manual deployment effort and improving release consistency.
- Collaborated with the frontend team by designing and documenting REST APIs and integrating the backend with a **React.js** frontend, enabling real-time communication for user authentication, job search, application submission, employer dashboards, and profile management through well-defined API contracts.

Backend Engineering Intern, FlexiSAF Edusoft Limited

2025 | Remote

- Contributed to the development and maintenance of enterprise-scale education technology solutions by implementing backend features, resolving production issues, and enhancing existing services within a collaborative engineering team.
- Worked closely with senior software engineers to analyze business requirements, participate in technical design discussions, and deliver high-quality, maintainable code following established architectural patterns and engineering best practices.
- Improved application quality by investigating defects, performing root cause analysis, reviewing pull requests, and participating in continuous code reviews to ensure reliability and maintainability.
- Gained hands-on experience with the complete software development lifecycle, including Agile ceremonies, version control workflows, CI/CD processes, API documentation, release validation, and cross-functional collaboration with product, QA, and engineering teams.
- Partnered with frontend developers and QA engineers to integrate and validate application features, troubleshoot API integrations, and support successful feature delivery from development through deployment in production environments.

EDUCATION

B.Sc. Chemistry, Federal University of Agriculture

2017 | Makurdi

PROJECTS

Market

An e-commerce platform designed to provide secure, scalable, and high-performance online shopping experiences through robust backend services, streamlined order management, and seamless payment processing.

- **Backend Solution:** Developed using **Java 21, Spring Boot, Spring Security, Spring Data JPA, Hibernate, PostgreSQL, and Flyway**, the backend provides JWT-based authentication and role-based access control (RBAC), product and category management, shopping cart functionality, order processing, inventory management, user administration, and RESTful APIs with **20+ endpoints** following industry-standard layered architecture and clean code principles.
- **Payment & Security:** Integrated **Paystack Payment Gateway** for secure payment initialization, callback verification, and transaction processing. Implemented **JWT authentication**, password encryption, stateless session management, request validation, centralized exception handling, and role-based authorization to secure business operations and sensitive API resources.
- **Frontend Integration:** Collaborated with a **React.js** frontend by designing and documenting RESTful APIs that power user authentication, product browsing, shopping cart management, checkout, order history, and account management through well-defined API contracts.
- **Deployment & DevOps:** Containerized the application using **Docker**, automated build and deployment workflows with **Jenkins CI/CD**, and prepared the application for cloud deployment on **AWS**, ensuring consistent development environments and production-ready deployments.
- **Documentation & Stack:** API documentation generated using **Swagger Doc** for streamlined API testing and collaboration.
- **Stack:** Java 21, Spring Boot, Spring Security, Spring Data JPA, Hibernate, PostgreSQL, Flyway, JWT, Paystack API, Docker, Jenkins, AWS, Maven, Swagger/OpenAPI, Git, React.js.
